

GLIDE 'N PICK

Order selection made **SIMPLE!**

- Increase your accessible pick faces.
- Simplify your slotting.
- Places hard to reach items at your fingertips.
- Ergonomic design reduces worker injury.
- Reduces damaged products.

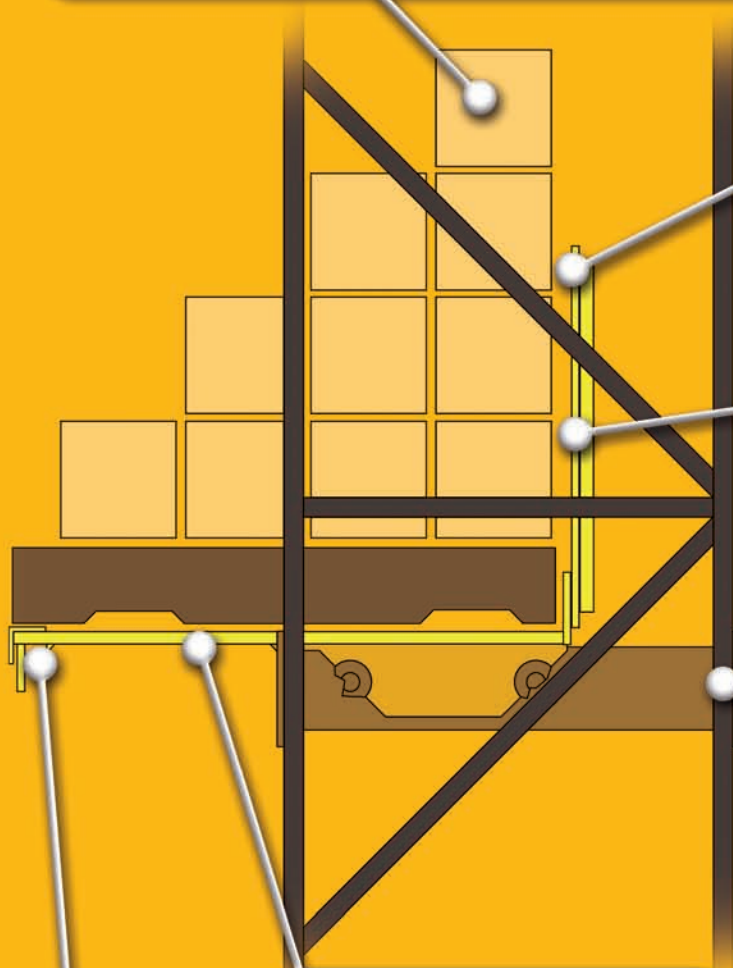

FRAZIER

GLIDE 'N PICK

The rear items are now easy and safe to reach. No more climbing on rack, grabbing for or dropping products. Reduces the risk of back injury.

A spring-loaded backrest keeps carton from falling backwards, therefore reducing product damage. The spring-loaded feature prevents damage to back rest by flexing on impact.

All components are manufactured from 100% structural steel providing greater strength and durability.

GLIDE 'N PICK can be installed directly on the existing shelf beams. The cart glides smoothly inside channel tracks.

A standard cart holds a 3000 lb. load.

The order selector simply unlatches the cart and it rolls smoothly forward, allowing easy access to the product. The locking mechanism prevents the cart from rolling forward until it is approximately 50% empty.

- GLIDE 'N PICK installs directly on shelf beams of almost any manufacturer's rack whether structural channel or roll formed in minutes.
- GLIDE 'N PICK carts are safety yellow for easy recognition in your rack system.
- GLIDE 'N PICK can be used to pick in any warehouse requiring manual order selection.
- GLIDE 'N PICK is already being used by Grocery Distributors, Retail Distributors, Food Processors and Dairy Manufacturers in dry and wet cooler and freezer environments.
